

## Resolution of the prototype platform

We captured an image of the USAF resolution target to validate the resolution performance of the reported prototype platform. As is shown in Fig. 1, we can resolve 0.35- $\mu\text{m}$  half-pitch linewidth in group 10, element 4, corresponding to a resolution of  $\sim 0.7\ \mu\text{m}$ .

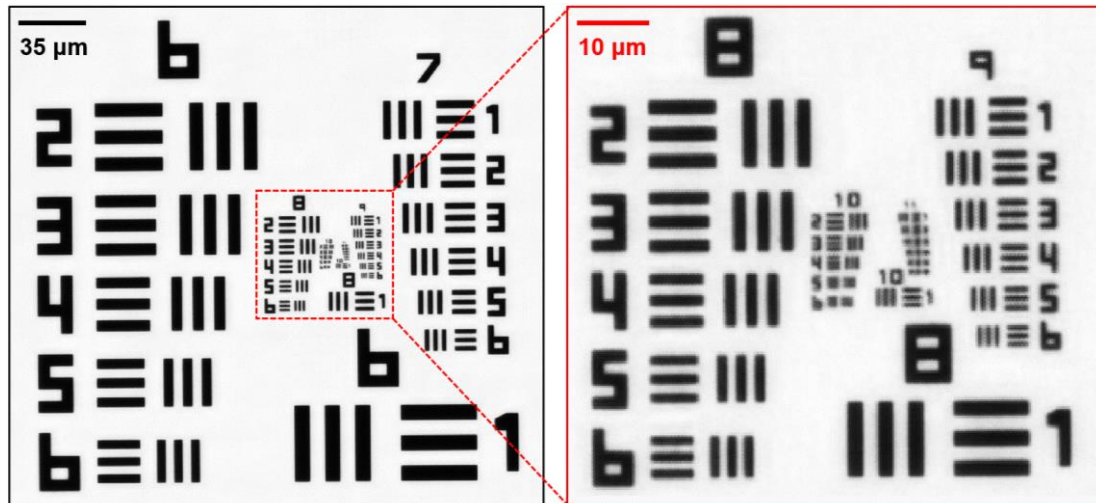

Figure 1: Resolution test of the reported OpenWSI prototype platform.
